

Census 2020 and Redistricting in Texas: San Antonio Regional Hearing

Senate Redistricting Hearing February 3, 2021

Census 2020

- Census counts used to <u>reapportion the U.S. House of</u>
 <u>Representatives</u>, determining how many seats each state gets.
- Census counts used by state officials to <u>redraw congressional and</u> state legislative boundaries to account for population shifts.
- Census derived data are used to allocate over \$1.5 trillion in federal funds to support healthcare, education, transportation, and other service programs.

Redistricting Dates

- Apportionment File sent to POTUS on 12/31/2020- now by 4/30/2021
- Redistricting Data File (Public Law 94-171 File) received by the Governor no later than April 1, 2021 now after July 31, 2021
- PL 94-171 released to states in groups of 8 states per week, with one week prior notice
- PL 94-171 File to include:
 - Race, Hispanic origin, 18 and older, occupancy status, and group quarters by type.
- Data available at <u>WWW.CENSUS.GOV/RDO</u>

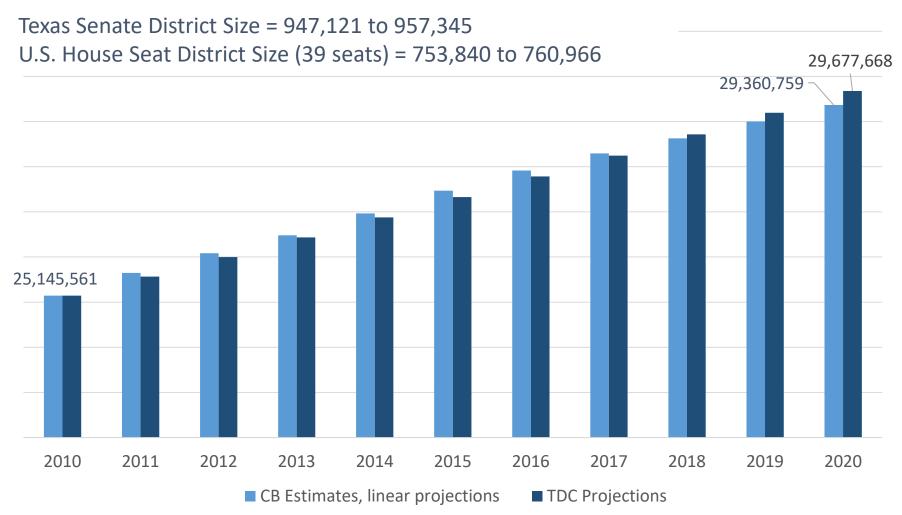

Population Growth and Projected Congressional Seats of Select States

	2010 Population	2020 Population	Numeric Change 2010-2020	Percent Change 2010-2020	Projected Congressional Seats Added	
United States	308,745,538	329,484,123	20,738,585	6.7%		
Texas	25,145,561	29,360,759	4,215,198	16.8%	3	
Florida	18,801,310	21,733,312	2,932,002	15.6%	2	
North Carolina	9,535,483	10,600,823	1,065,340	11.2%	1	
Arizona	6,392,017	7,421,401	1,029,384	16.1%	1	
Colorado	5,029,196	5,807,719	778,523	15.5%	1	
Oregon	3,831,074	4,241,507	410,433	10.7%	1	
Montana	989,415	1,080,577	91,162	9.2%	1	
California	37,253,956	39,368,078	2,114,122	5.7%	-1	
Minnesota	5,303,925	5,657,342	353,417	6.7%	-1

Census Bureau Announces Quality Assessments for 2020 Census

DECEMBER 07, 2020 RELEASE NUMBER CB20-CN.131

UBSCRIBE

Census Bureau Continues Practice of Evaluating Decennial Count

 $\,$ DEC. 7, 2020 - The U.S. Census Bureau announced updated plans for releasing information about quality along with the first results from the census, including releasing an unprecedented number of data quality indicators.

Each decade, the Census Bureau conducts extensive evaluations of the census and releases a variety of data quality metrics. Given the unique challenges that the COVID-19 pandemic posed to the 2020 Census, the Census Bureau plans to release additional data quality metrics.

In addition to upcoming quality metrics planned for release, the Census Bureau will engage in other evaluations of the 2020 Census in the coming months and years, including:

- Working with outside experts to evaluate data quality.
- Conducting extensive evaluations and assessments of 2020 Census operations.
- Comparing the 2020 Census results to other population totals.

All of these efforts support the evaluation of the quality of a census — analyzing the process, reviewing data carefully and comparing the results to other population totals.

2020 Census Detailed Operational Plan for: 24. Count Question Resolution Operation (CQR)

MARCH 31, 2020 VERSION: 1.0

PREPARED BY: DECENNIAL CENSUS MANAGEMENT DIVISION

Operation Purpose

The purpose of the 2020 Census CQR is to provide a mechanism for governmental units (GUs) to request a review of their official 2020 Census results. The 2020 Census CQR is the final operation by which updates to the 2020 Census data can be made. Tribal chairpersons and the highest elected officials (or their representative) from state and local governments in the United States and Puerto Rico can submit a CQR case to request review of the official 2020 Census counts of population and housing, and to correct boundary, geocoding, and certain coverage issues.

In keeping with the U.S. Census Bureau's long-established commitment to being entirely transparent in the production of our statistics and data products, I'm writing to provide an update on data processing for the 2020 Census. In every decennial census, we are the first to identify and analyze the quality of our data, including the extent to which we overcount or undercount key population groups in our country. We cannot do this in detail until we complete the Post-Enumeration Survey later this year, however we know a lot already about the accuracy and completeness of our population counts in the 2020 Census. I blogged with some initial impressions in early November, and we've made a lot of progress since then. But as reported in the media, some issues have surfaced as well. Most of these issues are typical and are similar to those we've encountered in prior decennial censuses. Others are novel to planned improvements for the 2020 Census, and some are related to the difficulties experienced collecting data during the COVID-19 pandemic.

The main consequence of these issues regards the schedule. The Census Bureau takes its constitutional and statutory duties very seriously. Even with the pandemic delaying data collection, we hoped to deliver the state population counts for apportionment by the statutory deadline of Dec. 31, 2020. Even with data collection not ending until mid-October, this was technically possible as long as we didn't encounter any significant processing issues. However, we were also realistic knowing that all prior decennial censuses encountered such issues. We devoted additional
